Q1) Write an SQL query to find all restaurants in a table called Restaurants whose names end with 'Cafe' using the LIKE operator.

```sql
SELECT *
FROM Restaurant
WHERE name LIKE '%Cafe';
```

Q2) In a Flipkart-style Products table, use the BETWEEN operator to select all products with a price between 500 and 1500 rupees.

```sql
SELECT *
FROM Products
WHERE price BETWEEN 500
AND 1500;
```

Q3) Write an SQL query to display all users from a Users table whose city is either 'Ahmedabad', 'Surat', or 'Vadodara' using the IN operator.

```sql
SELECT *
FROM Users
WHERE city IN
('Ahmedabad', 'Surat',
'Vadodara');
```

Q4) Given a table called Songs with columns song_name and artist_name, find all songs where the artist_name contains the letter sequence 'ar' anywhere in the name using the LIKE operator.

Hint: Use wildcards on both sides of the pattern.

```sql
SELECT *
FROM Songs
WHERE artist_name LIKE
'%ar%';
```
