Q1) Write an SQL query to select all restaurants from a table named 'restaurants' where the rating is greater than or equal to 4.5.

```sql
SELECT *
FROM restaurant
WHERE rating >= 4.5;
```

Q2) In a table called 'movies', filter and display only the movies released after 2020 and with genre 'Action' using the WHERE clause and AND operator.

```sql
SELECT *
FROM movies
WHERE release_year > 2020
AND genre = 'Action';
```

Q3) Given a table 'products' with columns (id, name, price, category), write a query to find all products not in the 'Electronics' category or with a price less than 500.

```sql
SELECT *
FROM products
WHERE category !=
'Electronics'
   OR price < 500;
```

Q4) Write an SQL query for a table 'users' to show all users who are NOT from 'Ahmedabad' and have more than 1000 followers.

Hint: Use the NOT operator combined with AND.

```sql
SELECT *
FROM users
WHERE NOT city =
'Ahmedabad'
AND followers > 1000;
```
