Q1) Write an SQL query using CASE WHEN to classify orders in a 'FoodOrders' table as 'Small', 'Medium', or 'Large' based on the total_amount: 'Small' for less than 300, 'Medium' for 300 to 999, and 'Large' for 1000 and above.

```sql
SELECT
    order_id,
    total_amount,
    CASE
        WHEN total_amount
< 300 THEN 'Small'
        WHEN total_amount
BETWEEN 300 AND 999 THEN
'Medium'
        WHEN total_amount
>= 1000 THEN 'Large'
    END AS order_category
FROM FoodOrders;
```

Q2) Given a 'Movies' table with a 'rating' column (out of 10), write an SQL query that adds a new column 'popularity' which shows 'Blockbuster' for ratings 8 and above, 'Hit' for 5 to 7.9, and 'Average' for below 5 using CASE WHEN ELSE END.

```sql
SELECT
    movie_id,
    rating,
    CASE
        WHEN rating >= 8
THEN 'Blockbuster'
        WHEN rating >= 5
THEN 'Hit'
        ELSE 'Average'
    END AS popularity
FROM Movies;
```

Q3) For a 'FlipkartProducts' table with a 'price' column, write an SQL query to create a 'price_category' column that bins prices as 'Budget' (below 500), 'Standard' (500 to 2000), and 'Premium' (above 2000) using CASE WHEN.

```sql
SELECT
    price,
    CASE
        WHEN price < 500
THEN 'Budget'
        WHEN price <=
2000 THEN 'Standard'
        ELSE 'Premium'
    END AS price_category
FROM FlipkartProducts;
```

Q4) Write an SQL query for a 'SpotifyTracks' table that uses CASE WHEN to assign a 'duration_label' column: 'Short' for tracks under 180 seconds, 'Medium' for 180-300 seconds, and 'Long' for over 300 seconds.

Hint: Use multiple WHEN conditions to cover all possible durations.

```sql
SELECT
    song_id,
    duration,
    CASE
        WHEN duration <
180 THEN 'Short'
        WHEN duration
BETWEEN 180 AND 300 THEN
'Medium'
        WHEN duration >
300 THEN 'Long'
    END AS duration_label
FROM SpotifyTracks;
```
